### Research & Development

“A main part of my work consists of guiding my team in the timely execution of our projects [...]. No two projects are the same and with each project you can learn more.”

### Engineering

“Jobs in this field are very stimulating and open up opportunities for an international career. My responsibilities are a very good mix of everything – quite like the Swiss Army knife!”

### Production

“One very motivating aspect is the feeling that you can personally move things forward – the ability to ‘add your own brick to the wall of knowledge.’”

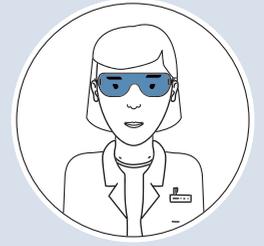

### Regulatory Affairs

“A big part of the job is finding new approaches, innovative solutions and solving problems. It’s interesting to work in cross-functional teams [...]. With very different questions to be answered every day.”

### Clinical Research

“I use my scientific background and operational experience to optimise the planning of clinical studies. It makes me happy to think that I am able to pay a small contribution to general human health and help patients who are in need.”

### Quality

“Being the Qualified Person (in Switzerland: Fachtechnisch verantwortliche Person, FvP) means that you are entirely responsible for your company’s products [...]. What is highly rewarding is the fact that you can contribute to ensuring that high quality products are available for patients.”

### Project Management

“In my position, I need to collaborate with project leaders, scientists, commercial and technical leaders. An important aspect for me is the opportunity to actively contribute to making a life-changing medicinal product available to patients by promoting and supporting its clinical development.”

### Marketing & Sales

“After 5 years in R&D, I completed an MBA [...]. Now my responsibilities include launching new therapies across different markets and optimising the commercialisation of products to serve patient needs.”
